

## Centrum Gateway™ – ATM

### Product Overview

VSoft's **Centrum Gateway - ATM** allows financial institutions to take advantage of check truncation at the ATM. Deposit automation at the ATM provides the capture of check and cash deposits at the ATM. Centrum Gateway - ATM collects images and data transmitted by image enabled ATMs for processing. In addition, VSoft's Digital Dashboard provides rich insight into your distributed capture network.

Image-enabled ATMs eliminate the hassle of deposit envelopes entirely. And by transforming your in-branch and remote-site ATMs into an extension of your distributed capture network, you benefit from another channel of check truncation.

Additionally, because VSoft has integrated Centrum Gateway - ATM with its extensive set of back-office applications, you receive the benefits of check truncation by going seamlessly from capture at the ATM to image exchange.

### How Does it Work?

Centrum Gateway - ATM relies on a comprehensive set of business rules to control the receipt, processing, and transmission of all image-captured items from your ATMs. You create rules so that your needs are met in an automated, controlled, and secure manner. The capture of the deposited item takes place at image enabled ATMs. Centrum Gateway - ATM is designed to receive images and data from industry leading ATMs.

Centrum Gateway - ATM connects to image-enabled ATMs in your distributed capture network to provide gateway functions for image-captured deposits. These include collecting the captured images and data from multiple ATMs at a central location, virtual sorting, deposit review and providing inputs to VSoft's Digital Dashboard for enterprise-wide monitoring and insight into your distributed capture network.

VSoft's Centrum Gateway - ATM is integrated with other VSoft Centrum applications to provide additional efficiencies that exist for all check capture channels. These features include:

- Deposit review and approval
- Item correction
- Image exchange
- Duplicate detection
- Archival
- Research

### Features

Connects to ATM systems from multiple vendors

- Links to the Digital Dashboard for rich insight into your distributed capture network
- Provides deposit review workflow featuring thresholds such as:
  - ▶ Number of checks in transaction
  - ▶ Item dollar amount
  - ▶ Transaction dollar amount
  - ▶ Verification of CAR amount

# CENTRUM

## Gateway™ – ATM

### Benefits

- Improves customer service
- Reduces exceptions and adjustments
- Accelerates funds availability for your customers
- Reduces paper handling for branch and central operations personnel
- Increases the opportunity for detecting fraudulent items
- Becomes an additional image capture point in your internal distributed capture network
- Provides a consistent back office and research process for all checks, regardless of capture entry point
- Reduces the frequency of trips to remote locations
- Reduces the manual effort required to process ATM deposit transactions
- Reduces courier and transportation costs
- Reduces the opportunity for fraudulent transactions

### System Requirements

- Centrum Gateway - ATM
- ATM vendor-supplied connector, if applicable
- The companion Centrum IP and Centrum Exchange solutions provide the integral functionality for image correction, balancing, and image exchange

When you choose VSoft's Centrum Gateway - ATM software, you get a solution that works with leading image ATMs. And of course, as an integral member of both the VSoft Agile and VSoft Centrum solution lines, you can add complementary points of presentment to your distributed capture network, benefit from image-based research and reporting, and fully participate in image exchange.
