

## Deposit Processing Automation For Cost Savings and Enhanced Customer Service

### FEATURES & BENEFITS

- **Agile Branch™ solutions increase back-office productivity, by expediting the processing while reducing the cost**
- **Captures larger commercial deposits behind the teller line or in the back room**
- **Agile Branch™ - Back Counter can be used independently or in tandem with Agile Branch™ - Teller**
- **Advanced technical capabilities detect duplicate deposits, reduces data entry and operation intervention with advanced CAR/LAR recognition**
- **Configured for batch processing and deferred proofing and balancing rather than individual balancing at a point of capture**
- **Point-of-presentment image capture enables internal ticket truncation at the branch level**

The Agile Branch™ - Back Counter captures larger commercial deposits behind the teller line or in the back room. Using the branch capture capabilities offered with Agile Branch™, financial institutions can benefit from the promise of cheque truncation cost savings and the reduction of paper. While it shares the same underlying functionality as the teller window implementation, the Agile Branch™ - Back Counter installation is configured for batch processing and deferred proofing and balancing, rather than individual transaction balancing at point of capture.

### HOW IT WORKS

The Agile Branch™ - Back Counter allows your financial institution to set the business rules that define your processes so your branch can capture, correct and perform preliminary validation for your commercial customers' higher-volume deposits.

Using a larger desktop scanner, cheques are imaged, data is captured and then verified against the bank branch rules. Advanced technologies validate the cheque data and images, thereby reducing data entry and manual intervention. The IRIS™ automated image repair technology also ensures against image quality return items.

Images and batches can be sent throughout the day, reducing courier trips and mitigating peak staffing needs.

End-of-day settlements between branches and central processing are simplified.

### OPERATIONAL & SERVICE BENEFITS

- Deposit and payment processing automation reduces errors and branch workload while reducing processing costs
- Customer errors are eliminated and image quality of scanned cheques are improved with automated recognition technologies
- Image workflow reduces manual proof and eliminates encoding
- Cheque truncation reduces overhead in operations, transportation and processing fees

### FEATURES

- Can be used with its sister solution – Agile Branch™ - Teller in tandem to increase back-office productivity, expedite processing and reduce the cost of processing
- Fully automates image-and-data workflows
- Integrated with V-Soft's powerful workflow tools such as automated Courtesy Amount Recognition (CAR), Legal Amount Recognition (LAR) and Intelligent Repair Image System (IRIS)
- Interfaces with other item processing systems

Working with Canadian banks, businesses and various law enforcement agencies to help prevent and investigate cheque fraud since 1955, Paystation offers a comprehensive product line designed to safeguard companies' information and financial assets. Paystation continues as the trusted leader with our complete line of cheque imaging products for Canadian Financial Institutions and businesses.
