

Paystation Branch Cheque Imaging Back Counter Credit Union Micro Film Replacement

FEATURES & BENEFITS

- Automation of current In-Branch Cheque Micro filming.
- Improves In-branch customer service by more efficient customer deposit research.
- Reduces operational cost and improves workflow efficiency.
- Provides a “walk before you run” deployment for forthcoming Cheque Truncation.
- Image Quality Assurance provides, optional usability test, image review and correction
- Compatible with a wide range of scanners, allowing you to match device footprint to document volume and price point.

Branch Cheque Imaging Automation for Cost Savings and Enhanced Customer Service

Beyond bringing a microfilm replacement solution and improved cheque image capture solution to the branch, the Agile Branch™ - Back Counter cheque imaging solution fully automates the image capture of cheque based deposits and payments. Implemented either separately or in tandem the Centrum Cheque Research Archive, Agile Branch™ - Back Counter cheque imaging can increase branch back-office productivity, expedite cheque imaging and reduces the cost of legacy cheque microfilming solutions. With Agile Branch™ - Back Counter, financial institutions can garner the benefits of imaging quickly and efficiently, and with less risk.

Agile Branch™ - Back Counter Cheque Imaging also provides the building block technology platform to enable the Institution to fully maximize the institutions investment as part of a overall cheque truncation strategy. Agile Branch™ serves as a cornerstone for full cheque truncation known as CRD (Cheque Replacement Document), targeted to be implemented by CPA over the next 12 months.

While it shares the same underlying functionality and value as a cost effective replacement for legacy Microfilm solutions, the Agile Branch™ - Cheque installation is configured for batch processing and deferred proofing and balancing rather than individual transaction balancing at point of capture. When CRD is implemented, with the addition of several cost effective modules, the institution can easily implement a full cheque truncation solution and send balanced files and images to your processor or in-house system.

HOW IT WORKS

Agile Branch™ - Back Counter can Image all of your branches documents utilizing a cost effective cheque document scanner to scan and capture each image and store it on your PC.

IRIS™ automated image repair technology ensures image quality. Cheques that are placed in the Cheque scanner upside down in error will be electronically reoriented without the operator having to manually intervene to correct the positioning of the upside down documents. Both the front and back of each document will be imaged quickly and efficiently to provides a “hands off” workflow.

Typically, Cheques are batched and processed as time permits throughout the day to streamline the workflow. At the end of the day, all documents are stored on the PC in date order. When needed for longer term storage, Cheque Image files can then be burned onto a CD and then get shipped off for storage as required.

Operation Benefits

- Cheque imaging is fully automated, reduces errors and branch workload
- Automated recognition technologies eliminates “bad microfilm” and improves quality
- Cheque Images can be captured more quickly throughout the day, mitigating peak staffing needs
- Replacement of old legacy Microfilm units which are more costly and subject to breakage.
- Reduces capital investment, while enhancing Institutions technology
- Provides Technology framework for future CRD (Full Cheque Truncation)
- Optional Centrum Cheque Research Archive can provide a long term enterprise level internal Cheque Image Archive.

When you choose the Agile Branch™ - Back Counter, you get an application that is uniquely matched to the needs of your type of financial institution: whether you’re a top 10 bank, a credit union member, or a de novo branch. And of course, as an integral member of the Agile solution line you can add complementary points of presentment to your distributed capture network, as well as use the VSoft Centrum Gateway™ connectors to your back office processing operations.

Working with Canadian banks, businesses and various law enforcement agencies to help prevent and investigate cheque fraud since 1955, Paystation offers a comprehensive product line designed to safeguard companies’ information and financial assets. Paystation continues as the trusted leader with our complete line of cheque imaging products for Canadian Financial Institutions and businesses.
